Doc Type: Working Group Document**Title: Final proposal to encode the Pahawh Hmong script in the UCS****Source: UC Berkeley Script Encoding Initiative (Universal Scripts Project)****Author: Michael Everson****Status: Liaison Contribution****Action: For consideration by JTC1/SC2/WG2 and UTC****Date: 2012-01-20**

1.0 Introduction. Pahawh Hmong is a script devised for writing the Hmong language by Shong Lue Yang (*Soob Lwj Yaj* ສົມ ລຸ້ງ ຢາຈ໌ [sóm lɰ̯ jâ]). Shong Lue Yang was a charismatic figure among the Hmong in Laos, and was considered by many to be a kind of messiah. It is said that in 1959 the writing system was revealed to him by two supernatural messengers who appeared to him over a period of months. A full account of this is given in Smalley, Vang, and Yang 1990. Devised in Laos, Pahawh Hmong was taken to northern Thailand refugee camps, and then moved with waves of immigrants to Minnesota and California in the United States, and to Australia. The writing system itself has had four Stages of development. In this document, the Romanized Popular Alphabet orthography (widely used by the Hmong in North America) is given alongside example text in Pahawh Hmong. Two features of the RPA are of note. Double vowels *ee* and *oo* indicate [ɛɲ] and [oɲ] respectively; final letters indicate tones thus:

RPA

-b	᷀	ɿ high-level
-m	᷁	ɿ low-glottalized
-d	᷂	ɿ low-rising
-j	᷃	ɿ high-falling
-v	᷄	ɿ mid-rising
-Ø	᷅	ɿ mid-level
-s	᷆	ɿ low-level
-g	᷇	ɿ falling-breathy

1.1 The Source Version, Pahawh Pa (*Phajhauj Paj* ປາ ປາ ປາ [pʰâ hâu pâ]), is not in current use. While containing the seeds of the system, in its structure and glyphs it is distinct from the later Stage Versions, and had little use as a practical system for writing Hmong. It is considered a separate but related script, and is not supported by this encoding.

1.2 The Second Stage Reduced Version, Pahawh Njia Dua O (*Phajhauj Ntsiab Duas Ob* ນຊີ້ ດູ້ ອ ປາ ປາ [pʰâ hâu ndʒíá dùa ʔó]), is in current use. It was taught by Shong Lue Yang in April 1965, and is supported by the Australian Hmong Language Institute and by Hmong Script Software's ຕຸ້ ປຸ້ ຕຸ້ *Cwjmem* [tɰ̯ mɰ̯] font; fonts are also available from the Hmong Language Institute in Minnesota. The Hmong user community in Australia uses the Second Stage Reduced Version.

1.3 The Third Stage Reduced Version, Pahawh Njia Dua Pe (*Phajhauj Ntsiab Duas Peb* ນຊີ້ ດູ້ ປາ ປາ [pʰâ hâu ndʒíá dùa pé]), is in current use. It rationalizes some features of the Second Stage Reduced Version, and is said by Chia Koua Vang to have been introduced by Shong Lue Yang in August

1970. Some members of the Hmong user community in Minnesota use the Third Stage Reduced Version. A Third Stage font is available from Hmongwriting.com.

1.4 The Final Version, Pahawh Tsa (*Phajhauj Txha* ൊꠞꠞꠞ ꠞꠞꠞ ꠞꠞꠞ [p^hâ hâu ts^ha]), is not in regular use. It is a radical simplification of the Third Stage Reduced Version and is said by Chia Koua Vang to have been introduced in January 1971 by Shong Lue Yang about a month before his assassination. Smalley *et al.* 1990 state that it is not in use as a practical system, though some people who knew it use it as a kind of shorthand (and called it “shorthand” in English). In meetings in St Paul 2011 all of the users of Pahawh Hmong agreed that no one was using this version of the script. Nevertheless, the encoding proposed here can represent text written in all three of the Revisions.

The fact that Stage Two and Stage Three orthographies are both used makes character naming and placement of characters in the code table slightly problematic. In the Third Stage Reduced Version, base characters without diacritics end in *-b* (ú or high-level) or *-v* (ǔ mid-rising) tones; these tones are represented by a more complex alternation of diacritics (*-b*, *-v*, *-Ø*, *-g*, *-m*) in the Second Stage Reduced Version. The easier Third Stage Reduced Version names have been used here—this does not imply a preference for either Stage, as UCS names are arbitrary. In the code charts, the vowel rimes follow the order taught by both Second Stage Reduced Version and Third Stage Reduced Version users, and the consonant onsets follow—by agreement with both groups—the order taught in the Source Version, since the later versions differed from both the Source Version and from each other. (The later versions both taught an order said to have been given to them by Shong Lue Yang, but as they were incompatible both groups chose to revert to the first order Shong Lue Yang taught.)

1.5 Sociolinguistic considerations. Users of Pahawh Hmong script respect the inventor, Shong Lue Yang, greatly. All users of the script know that it underwent modification from its original version in order to reduce the number of characters required. Users of the Second Stage Reduced Version have said that Shong Lue Yang told them that they should use that version until such time as the Hmong people were re-united. What such re-unification might mean is a matter of interpretation. Chia Koua Vang has said that Shong Lue Yang revealed the Third Stage Reduced Version to him in response to the difficulties he had implementing the Second Stage Reduced Version on a mechanical Laotian typewriter (a task given him by Shong Lue Yang). Users of the Second Stage Reduced Version say that they simply cannot verify whether this is true or not.

From the point of view of the UCS, this doesn't matter, as the proposed encoding supports both Second and Third Stages. Sociolinguistically, perhaps all that can be said is that users of the Third Stage Reduced Version are content to use that version, and that users of the Second Stage Reduced Version users will probably continue to use that orthography until they feel that Shong Lue Yang's prophesy of the re-unification of the Hmong has come to pass. Will UCS encoding and the use of Pahawh Hmong on the internet be interpreted as re-unification? Only time will tell. In my own view, I would venture to guess that most users of the Romanized Popular Alphabet who choose to take up Pahawh Hmong will find the Third Stage Reduced Version more congenial, because there is a one-to-one mapping between RPA tone mark letters and Third Stage tone diacritics. But most of them are satisfied to use RPA at present in any case.

2.0 Processing. Pahawh Hmong syllables are separated by spaces in text, and may contain one to four characters: base, base with diacritic, base + base, base with diacritic + base, base + base with diacritic, and base with diacritic + base with diacritic. Structurally, Pahawh Hmong is unique among the world's writing systems in that the vowel rime of a syllable (its vowel with or without tone diacritic) is written before the consonant onset of the syllable (its consonant with or without consonant-identifier diacritic). In the Examples 1 and 2, the structure of the words “Pahawh Hmong” (*Phajhauj Hmoob* [p^hâ hâu ^hmón]) is

analyzed, given in Second and Third Stage Reduced Version (Final Version happens to be identical to Third Stage Reduced Version in this example).

Example 2. Third Stage Reduced Version

2.1 Vowel rimes. Characters from 16B00..16B1B are vowel codas. Adding diacritics to these alters the tone. 16B1A..16B1B are long vowels. In Shong Lue Yang’s system, Hmong Daw dialect syllables KIAB ᩈ, KIAV ᩈᩃ, KAB ᩈᩃᩃ, and KAV ᩈᩃᩃᩃ are used for Hmong Leng dialect *kab*, *kav*, *kaab* or *kaav* respectively. A revision of the script by Jay Kue of Hmong Script Software includes special characters for *kaab* ᩈᩃᩃᩃ and *kaav* ᩈᩃᩃᩃᩃ (in Second Stage Reduced Version *kaam* and *kaav*). These are atomic characters with no decomposition. In the first place, decomposition would break the one-to-four character convention for representing Hmong syllables. In the second, the addition of a (non-productive) character I would be problematic as 16B50 ᩈᩃᩃᩃᩃᩃᩃ PAHAHWMONG NUMBER ZERO looks quite like it.

2.2 Consonant onsets. Characters from 16B1C..16B2F are consonant heads. Adding diacritics to these changes the base consonant to a different, usually unrelated, consonant. Use of diacritics to affect various changes is unsystematic for the consonants. For the vowels, Stage Two Reduced Version, Stage Three Reduced Version, and Final Stage Pahawh Hmong offer an increasing rationalization of relationships, which in Final Stage Pahawh Hmong is quite systematic. The differences are orthographic, however, and do not affect the encoding. As stated above, the Stage Three Reduced Version was chosen as the basis for the character names in the encoding because it is more systematic than the Stage Two Reduced Version, and because the Final Stage is a subset of the Stage Three Reduced Version.

2.3 Combining diacritics are found at 16B30..16B36 and function in the usual way. Note that 16B34 and 16B35 could be composed (16B32 + 16B30 and 16B32 + 16B31 respectively). Such an encoding is not recommended (because decomposition would break the one-to-four character convention for representing Hmong syllables) and no canonical decomposition is given in the character properties. See Figure 3 for further discussion of grounds for encoding these as script-specific characters.

2.4 Encoding order. Visual-order encoding should be preferred for Pahawh Hmong because it will make implementation less expensive and it is what users expect. The logical “reversal” of coda and head from the pronounced syllable does not affect the sorting algorithm, which follows visual order as well. Inputting and display are also done according to visual order. Unlike Devanagari, where *a few* vowel signs appear before the base consonant but should be represented phonetically in the backing store, *all* Pahawh Hmong syllables are uniformly represented as V^tC even though the pronunciation is CV^t. All current implementations employ this method of encoding.

3.0 Non-alphabetic characters are used in Pahawh Hmong.

3.1.0 Punctuation marks similar in function to generic punctuation are found at ASCII 16B37..16B3F. Ordinary generic punctuation marks like ? () . , ; : < > – — are used in Pahawh Hmong and can be represented by existing UCS characters.

3.1.1 Question mark 16B37 ൹ PAWAWH HMONG SIGN VOS THOM is used as a question mark by users of the Second Stage Revised Version. Users of the Third Stage Reduced Version employ the generic question mark U+003F “?”. (See Figures 5B, 9.)

3.1.2 Exclamation mark 16B38 ൹ PAWAWH HMONG SIGN VOS TSHAB CEEB was devised by Pa Kao Her (*Paj Kaub Hawj* ൹ ൹ ൹ [pâ káu hâw]) in 1985; Smalley and the Naadaa font retain a special glyph for this but the Cwjmem font either does not include it or prefers the generic exclamation mark. Shong Lue Yang also used U+0021 “!”. (See Figure 17.)

3.1.3 Comma 16B39 ൹ PAWAWH HMONG SIGN CIM CHEEM is used as a comma in mathematical texts written in the Second Stage Reduced Version. (See Figures 9, 11.)

3.1.4 Ampersand 16B3A ൹ is derived from the ampersand and was also invented by Pa Kao Her. Smalley’s font and the Naadaa font have a special glyph for this but in the Cwjmem font it faces the same direction as the generic ampersand. (See Figure 5B, 18.)

3.1.5 Percent sign 16B3B ൹ is the percent sign. Smalley and the Naadaa font use a different glyph ൹ for this but the Cwjmem font appears to modify the regular percent sign by having dots instead of rings. (See Figures 5B, 9, 18.)

3.1.6 Arithmetic operators are 16B3C ൹ PAWAWH HMONG XYEEM NTXIV (the plus sign), 16B3D ൹ PAWAWH HMONG XYEEM RHO (the minus sign), 16B3E ൹ PAWAWH HMONG XYEEM TOV (the multiplication sign), and 16B3F ൹ PAWAWH HMONG XYEEM FAIB (the division sign). Smalley *et al.* 1990 give them, with slightly different glyphs: ൹ ൹ ൹ ൹. (See Figures 11, 13, 14.)

3.1.7 Intonation mark 16B40 ൹ PAWAWH HMONG SIGN VOS SEEV indicates the sung or chanted nature of the text. It was also used by some Second Stage Reduced Version users to mark the *-d* tone. (See Figures 5A, 5B, 9, 17.)

3.1.8 Foreign pronunciation mark 16B41 ൹ PAWAWH HMONG SIGN MEEJ SUAB indicates a non-Hmong pronunciation of the syllable following: the syllable ൹ [mam] [ma], when written ൹, is pronounced [man], a Lao loanword meaning ‘to prepare to do’. The character has no inherent pronunciation and is used rarely. (See Figure 5B.)

3.1.9 Reduplication mark 16B42 ൹ PAWAWH HMONG SIGN VOS NRUA indicates reduplication of the syllable preceding: ൹ = ൹ ൹. *tsuag tsuag* [tʃua tʃua] ‘hurry hurry’. (See Figures 5A, 5B, 9, 17.)

3.1.10 Replication mark 16B43 𐌶 PAHAWH HMONG SIGN IB YAM indicates that what precedes it is to be repeated, like “ditto” is in English. (See Figure 5B.)

3.1.11 Section mark 16B44 𐌷 PAHAWH HMONG SIGN XAUS is used to indicate the end of a section. (See Figures 5B, 13.)

3.1.12 Military mark 16B45 𐌸 PAHAWH HMONG SIGN CIM TSOV ROG is used to indicate that a text has military content. (See Figure 12.)

3.2.1 Digits. 16B50..16B59 are the decimal digits 0–9. Third Stage Reduced Version users employ 16B5A 𐌹 PAHAWH HMONG DIGIT THIRD-STAGE ZERO while the Second Stage Reduced Version users make use of 16B50 𐌺 PAHAWH HMONG DIGIT ZERO, derived from the non-decimal tens number (see below). Both user groups agreed that it was not possible to unify these to characters. This is similar to the two digits 1 used in New Tai Lue.

3.2.2 Numbers. A nondecimal numeric system also exists, given at 16B5B..16B62. It is not in current use for arithmetic calculation, though it is still taught. Third Stage Reduced Version users employ 16B62 𐌻 PAHAWH HMONG NUMBER THIRD-STAGE TENS while the Second Stage Reduced Version users make use of 16B5B 𐌾 PAHAWH HMONG NUMBER TENS, derived from the Source Version tens number. Both user groups agreed that it was not possible to unify these two characters. Good fonts should make some distinction between 16B50 𐌺 and 16B62 𐌻.

3.3 Logographs. Characters encoded at 16B63..16B77 are logographs.

3.3.1 Grammatical classifier. 16B63 𐌼 PAHAWH HMONG SIGN VOS LUB represents the syllable *lub* 𐌼𐌺 [lú], the most common grammatical classifier in the Hmong language. Smalley *et al.* 1990 give the example 𐌼 𐌺𐌺 *lub npe* [lú mbe] ‘a name’. Shong Lue Yang created a sign for this because of the high frequency of the word in the language. Considering the similarity of the two glyphs used to write it, it seems that in devising the character Shong Lue Yang was being very practical indeed. (See Figures 5B, 15, 18.)

3.3.2 Logographs for periods of time. 16B64..16B6C are logographs naming periods of time: *xyoo* 𐌽 ‘year’, *hli* 𐌾 ‘month’, *zwj thaj* 𐌿 ‘date’, *hnub* 𐌷 ‘day’ respectively. Third Stage Reduced Version users employ 16B66 𐌾 PAHAWH HMONG SIGN THIRD-STAGE HLI while the Second Stage Reduced Version users make use of 16B65 𐌾 PAHAWH HMONG SIGN HLI; the two signs evidently have different origins. Other logographs in this category are *nqig* 𐌿 ‘waning moon’, *xiab* 𐌿 ‘waxing moon’, *ntuj* 𐌿 ‘season’, and *av* 𐌿 ‘earth’. (It is not certain what the temporal use of *av* is, but it is clearly related to *nqig*, *xiab*, and *ntuj*.) (See Figure 5B.)

3.3.3 Logographs for correspondence. 16B6D..16B77 are logographs used in correspondence in various ways: *txheej ceev* 𐌿 ‘urgent’, *meej tseeb* 𐌿 ‘facts’, *tau* 𐌿 ‘received’, *los* 𐌿 ‘come’, *mus* 𐌿 ‘go’, *cim hais lus ntog ntog* 𐌿 ‘smooth’, *cim cuam tshooj* 𐌿 ‘fraction’, *cim txwv* 𐌿 ‘do not open’, *cim txwv chwv* 𐌿 ‘do not touch’, *cim pub dawb* 𐌿 ‘give freely’, and *cim nres tos* 𐌿 ‘stop’. (See Figures 5B, 9.)

3.3.4 Logographs for clan names. 16B7E..16B8F are logographs for clan names. 16B7E..16B8B were devised by Shong Lue Yang, and 16B8C..16B8F were added by Chia Koua Vang (*Txiaj Kuam Vaj* 𐌿𐌿 𐌿𐌿 𐌿𐌿 [tsâ kua vâ]). (See Figure 16.)

According to Hmong custom, men and women from the same clan cannot marry each other, and are restricted in their behavior in each other’s presence. They are perceived to be like brothers and sisters so far as the

appropriateness of sexual contact is concerned, with considerably more restrictions than exist in a sibling relationship in the West. For example, men and women of the same clan should not throw the ball to each other at the Hmong New Year, a custom potentially leading to courtship; neither should they spend time alone together....

Shong Lue Yang designed the clan logographs to be sewn into garments or worn as badges, or posted on desks or doors to identify a person's clan. This would enable people to behave appropriately. Such identification was needed in the resettlement camps in Laos to which many Hmong people had fled for protection from the communists. In those surroundings they did not know all of their neighbors, much less other people they met.

It is also sometimes hard to identify a person's clan even if you have heard the person's name. Order of given name and clan name is not fixed. Somebody called *Vaj Yaj* ວັຈ ວັງ 'Vang Yang' might belong either to the *Vang* clan or the *Yang* clan, depending on which order is being used. Under conditions where strangers are regularly encountered, it is awkward to have to ask constantly what the other person's clan is.... (Smalley *et al.* 1990:83–84)

These characters are not in widespread current use, but are encoded for historical reasons. At least one font contains them. They are not “logos” or analogous to the character used by the artist formerly known as the Artist Formerly Known as Prince; they are more like Han characters used for family names.

4.0 Ordering. The ordering given in Lee Nao Long et al. 2001, which uses the Second Stage Reduced Version orthography, follows the relative order of the tones, namely $-b < -m < -d < -j < -v < -\emptyset < -s < -g$ ($\acute{v} < \grave{v} < \check{v} < \hat{v} < \breve{v} < \tilde{v} < \bar{v}$). All stages use this tone-based ordering—where they differ is in which *characters* they use to represent the tones. This causes difficulties, in particular for a generic ordering based on the Second Stage Reduced Version.

In the presentation below, base characters are black, letters with CIM TUB are (using Web-named colours) **dark slate blue**, letters with CIM SO are **dark goldenrod**, letters with CIM KES are **dark orange**, letters with CIM KHAV are **dark green**, letters with CIM SUAM are **crimson**, letters with CIM HOM are **dark magenta**, and letters with CIM TAUM are **dark cyan**.

That is, while the Second Stage Reduced Version orthography begins:

$$\grave{v} \acute{k}é < \grave{v} k\grave{e} < \hat{v} k\grave{e} < \hat{v} k\acute{e} < \breve{v} k\grave{e} < \bar{v} k\acute{e} < \bar{v} k\grave{e} < \bar{v} k\grave{e} \\ keb < kem < ked < kej < kev < ke < kes < keg$$

The Third Stage Reduced Version orthography begins:

$$\grave{v} \acute{k}é < \hat{v} k\grave{e} < \hat{v} k\grave{e} < \breve{v} k\acute{e} < \bar{v} k\grave{e} < \bar{v} k\acute{e} < \bar{v} k\grave{e} < \bar{v} k\grave{e} \\ keb < kem < ked < kej < kev < ke < kes < keg$$

The Final Version orthography begins:

$$\grave{v} \acute{k}é < \hat{v} k\grave{e} < \hat{v} k\grave{e} < \breve{v} k\acute{e} < \hat{v} k\grave{e} < \hat{v} k\acute{e} < \hat{v} k\grave{e} < \hat{v} k\grave{e} \\ keb < kem < ked < kej < kev < ke < kes < keg$$

For the purposes of a default ordering that easily supports both Third Stage Reduced Version and Final Version orthographies, each of the consonants and each of the vowels can be given a primary weight. This applies diacritical marks used only in the Final Version orthography to vowel rimes which do not appear in that Version, but it does form a complete specification. Since the consonant onsets are uniform in all stages, the list below gives only those forms which occur.

This regular ordering accounts for all base letters and diacritic combinations—even those which are never used (unused combinations are underscored). Although CIM SO, CIM KES, CIM KHAV, CIM SUAM, and CIM TAUM are never used with consonant onsets (which is why they are not shown in here), this scheme could just as easily accommodate the sequences $\mathfrak{C} < \mathfrak{C} < \mathfrak{C} < \mathfrak{C} < \mathfrak{C} < \mathfrak{C} < \mathfrak{C}$, etc.

4.1 Generic ordering accommodating Third Stage Reduced Version and Final Version orthographies:

Vowel rimes:

[illegible]

Consonant onsets:

[illegible]

Notice that $\text{ṭ}dlhau$ is also found, in an orthography which supports Hmong Leng.

4.2 Generic ordering accommodating Second Stage Reduced Version orthography. Since all combinations have to be accommodated in the ordering, the previous table has been taken as a base, and only those characters that needed to be moved have been.

Vowel rimes:

[illegible]

Consonant onsets:

Ć < Ć̇ < Ć̈ < K < K̇ < K̈ < Ǫ < Ǫ̇ < Ǫ̈ < Ɔ < Ɔ̇ < Ɔ̈ < Ʀ < Ʀ̇ < Ʀ̈ < Ʊ < Ʊ̇ < Ʊ̈ <
 Ƣ < Ƣ̇ < Ƣ̈ < ƣ < ƣ̇ < ƣ̈ < Ƥ < Ƥ̇ < Ƥ̈ < ƶ < ƶ̇ < ƶ̈ < Ʒ < Ʒ̇ < Ʒ̈ < ƹ < ƹ̇ < ƹ̈ <
 ƺ < ƺ̇ < ƺ̈ < ƻ < ƻ̇ < ƻ̈ < Ƽ < Ƽ̇ < Ƽ̈ < ƽ < ƽ̇ < ƽ̈ < ƿ < ƿ̇ < ƿ̈ < ƿ̇̇ < ƿ̇̈ < ƿ̈̇ <
 ƿ̈̈ < ƿ̈̇̇ < ƿ̈̇̈ < ƿ̈̈̇ < ƿ̈̈̈ < ƿ̈̈̇̇ < ƿ̈̈̇̈ < ƿ̈̈̈̇ < ƿ̈̈̈̈ < ƿ̈̈̈̇̇ < ƿ̈̈̈̇̈ < ƿ̈̈̈̈̇ < ƿ̈̈̈̈̈ <

Notice that $\dot{\text{t}} dlhau$ is also found, in an orthography which supports Hmong Leng.

6.0 Character names. The chief problem in encoding Pahawh Hmong involves what to name the vowel rimes, because the values given to the base letters in the Second Stage Reduced Version and the Third Stage Reduced Version are not compatible. The table to the right here shows the problem: the expected order is the order of the tones (left to right then top to bottom), regardless of the shape of the glyphs. The black glyphs in the table here (without diacritics) should be the source names for the characters.

In the code chart below, the names used are Third Stage Reduced Version names based on the regular paradigm.

Second Stage Reduced Version vowel rimes:

-b	-m	-d	-j	-v	-Ø	-s	-g
ᄀ kény	ᄁ kẹᅇ	ᄂ kẹᅇ	ᄃ kẹᅇ	ᄄ kẹᅇ	ᄅ keᅇ	ᄆ kẹᅇ	ᄇ kẹᅇ

6.1 Resolving the Vowel Rime Names

For the Second Stage Reduced Version and Third Stage Reduced Version vowel rimes, whose names would be most accepted and used by the communities, the vowel rime names derived from the tables shown above would be:

<i>Glyph</i>	<i>Second</i>	<i>Third</i>
ᵛ	keem	keeb
ᵛ̄	kee	keev
ᵛ̄̄	kim	kib
ᵛ̄̄̄	ki	kiv
ᵛ̄̄̄̄	kaum	kaub
ᵛ̄̄̄̄̄	kau	kauv
ᵛ̄̄̄̄̄̄	kum	kub
ᵛ̄̄̄̄̄̄̄	ke	kuv
ᵛ̄̄̄̄̄̄̄̄	kem	keb
ᵛ̄̄̄̄̄̄̄̄̄	<i>kev</i>	<i>kev</i>
ᵛ̄̄̄̄̄̄̄̄̄̄	kaim	kaib
ᵛ̄̄̄̄̄̄̄̄̄̄̄	kai	kaiv
ᵛ̄̄̄̄̄̄̄̄̄̄̄̄	<i>koob</i>	<i>koob</i>
ᵛ̄̄̄̄̄̄̄̄̄̄̄̄̄	<i>koov</i>	<i>koov</i>
ᵛ̄̄̄̄̄̄̄̄̄̄̄̄̄̄	<i>kawb</i>	<i>kawb</i>
ᵛ̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄	kaw	kawv
ᵛ̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄	kuam	kuab
ᵛ̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄	kua	kuav
ᵛ̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄	kom	kob
ᵛ̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄	kog	kov
ᵛ̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄	<i>kiab</i>	<i>kiab</i>
ᵛ̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄	kia	kiav
ᵛ̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄	kam	kab
ᵛ̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄	<i>kav</i>	<i>kav</i>
ᵛ̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄	kwm	kwb
ᵛ̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄	<i>kwv</i>	<i>kwv</i>
ᵛ̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄	kaam	kaab
ᵛ̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄	<i>kaav</i>	<i>kaav</i>

Where these vowel rime names are identical, they are simply used as the name for the corresponding character in the code chart. Where they are not identical (identical ones are *italicized* above), a choice has to be made for the encoded character name, and the proposed choice is to use the Third Stage Reduced Version names in those cases, for consistency. In all cases, where the Second Stage and Third Stage names differ, the Second Stage name is added to the code chart as an alias, so that users of either system can easily find names appropriate to their usage.

Note that while the spellings of these vowel rimes in Latin letters is rather different, the differences are in the final letters, which transcribe the tones for the syllables. So the actual difference in the syllables used to represent the names is just in the tones used for them.

7. Unicode Character Properties.

9. Acknowledgements. This project was made possible in part by a grant from the U.S. National Endowment for the Humanities, which funded the Universal Scripts Project (part of the Script Encoding Initiative at UC Berkeley) in respect of the Pahawh Hmong encoding. Any views, findings, conclusions or recommendations expressed in this publication do not necessarily reflect those of the National Endowment for the Humanities. This project could not have been completed without the generous help of those Hmong specialists who participated in meetings in St Paul, Minnesota, 30 October and 1 November 2011.

The onset and rime elements of each syllable are written in reverse order from the way they are pronounced, that is, rime–onset, although the monosyllabic morphemes themselves are written from left to right across the page. Spaces are used to separate morphemes, which are thus typically represented by pairs of symbols.

Figure 1b. Chart of consonant onsets from Ratliff 1996.

Figure 2. Chart of Second Stage Revised Version vowel rimes and consonant onsets from Lee Nao Long *et al.* 2001.

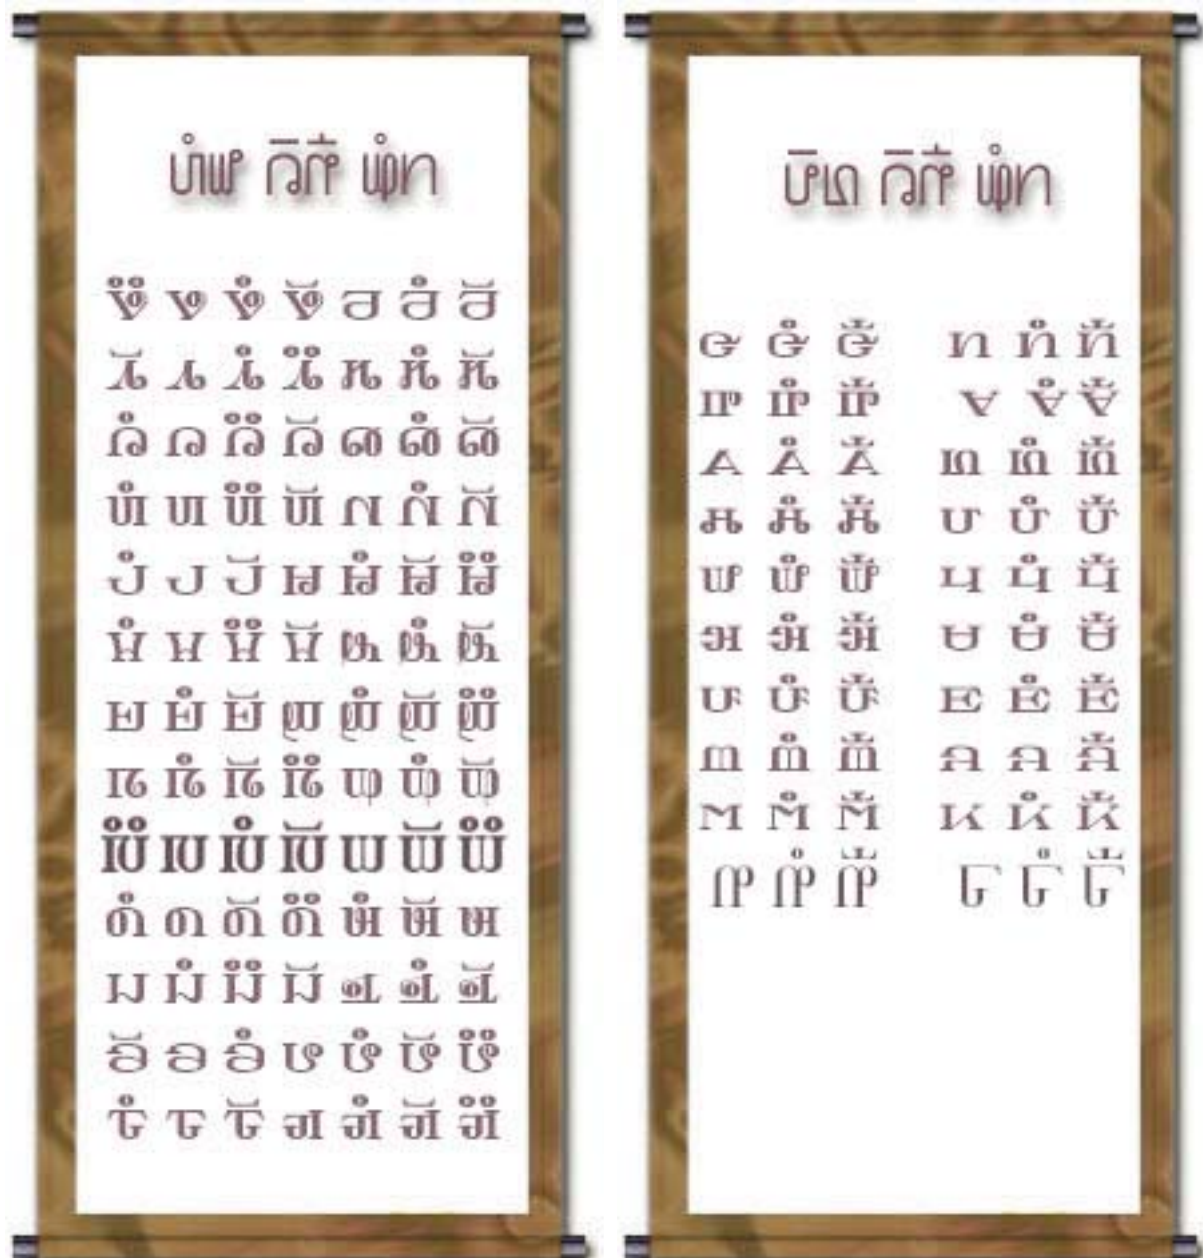

Figure 3. Chart of Second Stage Revised Version vowel rimes and consonant onsets from <http://www.pahauhhmong.org/>. Notice the glyph shapes of the diacritics in both the monoline font at the top and the more decorative font below. Compare these with the glyphs in the code chart. The shape of U+16B30 PAHAWH HMONG MARK CIM TUB (literally ‘son mark’) and U+16B36 PAHAWH HMONG MARK CIM TAUM (‘beans mark’) have hollow forms here, but are filled in other font styles. Similarly, the horizontal bar in U+16B32 PAHAWH HMONG MARK CIM KES (‘line mark’) and U+16B35 PAHAWH HMONG MARK CIM HOM (‘kind mark’) has a distinctive shape in the decorative font.

The Pahawh Hmong diacritics were devised by Shong Lue Yang in isolation, and have no genetic relation to similar-looking punctuation in the European tradition (DOT ABOVE, DIAERESIS, MACRON). Since it can also typically take shapes which are different from the typical shapes that European punctuation has, it would be inappropriate to attempt to unify Pahawh Hmong diacritics with characters in the General Punctuation mark. (Similar arguments were given for N’Ko diacritics.)

Figure 19. Signatures of Second Stage Reduced Version participants in the meetings which led to this proposal.

A. Administrative

1. Title

Preliminary proposal for encoding the Pahawh Hmong script in the UCS

2. Requester's name

UC Berkeley Script Encoding Initiative (Universal Scripts Project)

3. Requester type (Member body/Liaison/Individual contribution)

Liaison contribution.

4. Submission date

2012-01-20

5. Requester's reference (if applicable)

6. Choose one of the following:

6a. This is a complete proposal

No.

6b. More information will be provided later

Yes.

B. Technical – General

1. Choose one of the following:

1a. This proposal is for a new script (set of characters)

Yes.

1b. Proposed name of script

Pahawh Hmong.

1c. The proposal is for addition of character(s) to an existing block

No.

1d. Name of the existing block

2. Number of characters in proposal

128.

3. Proposed category (A-Contemporary; B.1-Specialized (small collection); B.2-Specialized (large collection); C-Major extinct; D-Attested extinct; E-Minor extinct; F-Archaic Hieroglyphic or Ideographic; G-Obscure or questionable usage symbols)

Category A.

4a. Is a repertoire including character names provided?

Yes.

4b. If YES, are the names in accordance with the “character naming guidelines” in Annex L of P&P document?

Yes.

4c. Are the character shapes attached in a legible form suitable for review?

Yes.

5a. Who will provide the appropriate computerized font (ordered preference: True Type, or PostScript format) for publishing the standard?

Michael Everson and Jason Glavy

5b. If available now, identify source(s) for the font (include address, e-mail, ftp-site, etc.) and indicate the tools used:

Michael Everson, Fontographer.

6a. Are references (to other character sets, dictionaries, descriptive texts etc.) provided?

Yes.

6b. Are published examples of use (such as samples from newspapers, magazines, or other sources) of proposed characters attached?

Yes.

7. Does the proposal address other aspects of character data processing (if applicable) such as input, presentation, sorting, searching, indexing, transliteration etc. (if yes please enclose information)?

Yes.

8. Submitters are invited to provide any additional information about Properties of the proposed Character(s) or Script that will assist in correct understanding of and correct linguistic processing of the proposed character(s) or script. Examples of such properties are: Casing information, Numeric information, Currency information, Display behaviour information such as line breaks, widths etc., Combining behaviour, Spacing behaviour, Directional behaviour, Default Collation behaviour, relevance in Mark Up contexts, Compatibility equivalence and other Unicode normalization related information. See the Unicode standard at <http://www.unicode.org> for such information on other scripts. Also see Unicode Character Database <http://www.unicode.org/Public/UNIDATA/UnicodeCharacterDatabase.html> and associated Unicode Technical Reports for information needed for consideration by the Unicode Technical Committee for inclusion in the Unicode Standard.

See above.

C. Technical – Justification

1. Has this proposal for addition of character(s) been submitted before? If YES, explain.

No.

2a. Has contact been made to members of the user community (for example: National Body, user groups of the script or characters, other experts, etc.)?

Yes.

2b. If YES, with whom?

Anthony Lee, Chia Koua Vang, Tzianeng Vang, Gymbay Moua, Shong Yang

2c. If YES, available relevant documents

3. Information on the user community for the proposed characters (for example: size, demographics, information technology use, or publishing use) is included?

Historical and contemporary cultural use by Hmongs and historians of Hmong culture.
